ing specialist, will be prin-
cipal speaker for the Exten-
sion Marketing Meeting, on
Monday at 8 p.m., in the
SPABC meeting room.

March Egg Output Hits Record High for Month

Generally favorable March weather, along with con-
tinuing better management were largely responsible for
the record 342 million egg production figures for the state
in the month.

Production was 14 per cent above February and 13
per cent above March of '58.

An increased number of lay-
ers on hand also contributed
to the increase in egg pro-
duction. Average number of
layers in production in the
state during March was 17,
784,000—four per cent more
than a year ago.

The Feb. to March season-
al decline in layers was only
two per cent compared to a
four per cent average.

The record rate of lay for
March of 19.25 eggs per hen

was 16 per cent above Feb-
ruary and nine per cent ab-
ove March 1958.

The March egg-feed ratio
was 10.7 (lbs. of mash that
can be bought by one dozen
eggs), compared with 13.3
in March 1958 and 11.1 in
February, for Pennsylvania.
The U. S. ratio was 9.9, com-
pared with 12.0 in March of
1958 and 10.4 in February.

The state broiler feed ra-
tio in March was 4.2, while
the national ratio was 3.5. The
state March, 1958 ratio had
been 4.7 and the nation's 4.4.

Egg Producers Urged To Attend Market Study

Meeting Set For April 30 In Manheim Twp High School

Spokesmen for the Lancaster County Extension Ser-
vice Poultry Assn., Feed and Egg dealers and hatcherymen
have announced a jointly-sponsored county-wide "Egg
Marketing Meeting" for 8 p.m. daylight saving time, April
30 in the Manheim Twp. high school auditorium. Special
invitations are being mailed to more than 3,000 egg produc-
ers in the county, according to Harry S. Sloat, assoc. coun-
ty agent.

"Purpose of the meeting is
to study the impact of other
egg producing areas on the
market for Lancaster Coun-
ty eggs and look into ways
for improving the currently
dismal egg market," Sloat
reports.

A spokesman for the Coun-
ty Assn. stated the spons-
oring organizations for the
meeting hope to have more
than 1,000 county egg pro-

ducers on hand to hear the
various reports to be given
and participate in sessions
afterward.

Principal speaker for the
meeting will be Dr. Ralph
Baker, professor of market-
ing research at Penn State.
Dr. Baker will deliver an
illustrated slide talk on his
recent national tour, during
which he made an intensive
study of the egg industry.

Agency Cooperation Brings Conservation

An outstanding example of cooperation between pub-
lic and quasi-public agencies and a Lancaster County far-
mer this month has resulted in a unique soil and water
conservation project's completion.

The project involved contour-terracing of an 18-acre
field on the Paul Rowe farm, Strasburg RD 1. However, in
this particular instance, the three 650 foot terraces are ab-
solutely straight and parallel.

The project started when
Rowe told Abner House-
knecht, local Soil Conserva-
tion Service aide, of his
troubles in water and soil
loss on the field. He report-
ed added trouble from hav-
ing to carry water runoff un-
der his 9,000 bird broiler
house by a large pipe, due
to the poor location of nat-
ural drainage.

The ideal thing, he told
Houseknecht, would be to
construct terraces to carry
the water over a reconstruc-
ted road bank to the east of
the field, instead of letting it
run to the center and out
the south side as it had been
doing.

But, smoothing the high
road bank and diversion of
water into the road ditch
would require approval of
the state Highway Dept. If
this could be secured, the
bank dirt could be used in
filling the low drainage area
at the bottom of the field,
permitting the terraces to be
installed on straight, parallel
lines. Rowe felt the latter
would be necessary to his
truck farming operation, if
at all possible.

Houseknecht verified this
theory with a survey and
contacted Amos Funk, chair-
man of the county Soil Con-
servation District, and asked
him to act as a go-between
for Rowe with the highway
department.

Department officials made
an inspection of the site and
quickly approved when they
saw the general improve-
ment—plus finding that in-

EDITORIAL

The idea of snow and 30-degree weather, on April 13 in Lancaster County has about as little appeal as any conditions your imagination can produce in an unwanted nightmare. But it happened.

Some much-needed spring moisture resulted from the snow; therefore letting it come under the heading of "totally unexpected hazards and mixed-blessings of farming."

For those who are directly connected with the unpredictable business of Food and Fiber production: the unseasonable snowfall again served to emphasize one of the prime considerations in a "farm program" or any counterpart.

In a business where the most important single factor is totally uncontrollable the farmer is doing a better than adequate job by providing sufficient production to feed his countrymen, without the occasional appearance of famine.

Why, therefore, should the American farmer be subjected to substandard economic returns for his efforts in overcoming the hazards of nature?

Why should farmers see their fair share of the nation's income depressed by one-fifth, and their net profit pared even more in proportion; because of farm "surpluses" as small as fractions of one per cent of the annual product.

The excessive effect of these small "surpluses" in price depression is more than ample proof that economics are a ruthless battle on "dog-eat-dog" principles.

This recalls the story of the small boy, who ran up to a dog-fight and began enthusiastic cheering for one of the participants. A larger boy promptly chased the little lad from the vicinity with the notice to, "Go get your own dog if you want in this fight."

This is the farmer's position in present-day economic struggles where big business, big labor, big finance, big government and big organization are mixed in the general melee. If the farmer wants in or expects to stay in the fight, he had better get himself a "dog" — or end up on the outside, without even being able to look in.

Another very-close-to-home instance

of need for organization by farmers has appeared with the suggestion that Pennsylvania impose a 25 per cent tax on cigars to help meet the state budget.

Inasmuch as Lancaster County farmers produce more cigar tobacco than growers of any state, this proposal does not just come close—it sits down at the dinner table and helps itself.

The reason for the proposal is fairly obvious. In the search for new tax revenues, state officials are deterred from imposing any tax whatsoever on many products, because the businesses which would be effected are well organized and can bring powerful pressure to bear in Harrisburg. Since most industry is fairly well dispersed throughout the state, this pressure is quickly translated to legislative votes.

In the case of the cigar industry however, it is relatively minor in most of the state. At the same time, it is important among farmers who have traditionally avoided organization. Prevention of this tax's enactment may require immediate action, which is not likely to be forthcoming from the farm end of the state's cigar industry.

The manufacturers are, of course, being quite vocal in their resistance. We already have received "news releases" from the Lancaster Leaf Tobacco Board of Trade.

Their spokesmen decry the proposed 25 percent levy, first of all on the grounds that passage "can irreparably damage the future of thousands of Penna. tobacco growers," then for the harm to the processing industry.

Since we possess a natural skepticism for cries of "Spare the farmer" from those who profit directly from buying his products at the lowest possible price, constant with maintaining the supply of raw material; we feel this approach is selected as the best means of preventing passage of the proposal.

If the "dealer-processors" can see the value of protesting in the farmers' name, they probably expect to obtain the best results through this.

How much greater results could be realized if the farmers were able set their own "dog" into the fight?

would also be required to pay workers' transportation.

Further, it would provide that all farmers in an area would have to pay the same wage for similar work and that if one employer voluntarily raised wages then all farmers using USES-recruited labor would have to increase wages by the same amount.

Protesting that such regulations could raise farm labor costs by many millions of dollars, the Farm Bureau is opposing the proposed order on the ground that this "constitutes legislation by executive order" and that "Congress has specifically rejected similar proposals in the past."

Vary the amount of meat you buy according to the amount of bone in it, suggests Mrs. E'sie Keeney Penn State extension consumer education specialist. For each serving, allow one-third lb. of boneless, one-half lb. of bone-in, and three-fourths of a pound of bony meat.

Tragic Failure

Lesson for April 19, 1959

KING SAUL had the makings of success; but he failed. We must not exaggerate his failure, for there were some who remembered him with pride, and even named sons after him. The great Christian apostle Paul had been named Saul by his family, for example.

Nevertheless, as kings went, and especially when compared with the great King David, Saul missed the mark. As we were saying last week, he was like a man with a good hand who plays badly and loses the game after all. What went wrong with him?

Dr. Foreman

Voice of God

At a time in his life when a throne would have seemed a fanciful dream, the prophet Samuel had taken Saul secretly, and solemnly poured oil on his head, thus anointing him to be the future king of Israel. This was before the great battle of Jabbesh that gave Saul his national reputation. Saul himself may not have taken Samuel's prediction seriously, because he went on back to his farming. But after the people voted him in as the first king, Saul would of course remember Samuel and the secret anointing and prophecy. There is no doubt that Saul was convinced that Samuel was a true prophet, that he spoke with the authority of God himself.

Samuel was the one link with God that Saul had. He had no Bible to study, no church to help him, and he himself was anything but a religious genius. David and others seem to have been able to understand God's will by direct revelation; but for Saul, God's voice and will had to come to him through the prophet.

The most serious element in Saul's failure was right here: he

stopped calling on God. He had since God had given him whatever he wanted to succeed the wrong, but they adopt wronging good people support. God for and against same time, and age men to God.

Voice of S.H.

Saul made a mistake by trusting in an old, calumnious, a man to protect him from the sin of listening and ambitious. He wanted it, it must be said, but people could make it. You may any one would judgment about many do. The works is familiar cause we have other argued the same way. "Look at me," "of course, voice of God, and speaking in the Church. But I believe that the Church don't need me in my own more of the same this does it. It's own thoughts or else it's thoughts with God."

Voice of the Church

The third mistake was perhaps common, in our was letting the speak for God in mistake, and others. But you wrong figured out. What is right to found out by yet people keep foolish blunder. Kinsey Report that are widely practiced people interviewed and leap to the what so many right. And so the what so many wrong. They question: What say?

(Based on outline of the Division of the National Council of Christ in the U.S. Community Press)

Davidson

THIS WEEK

—In Washington

With Clinton Davidson

STORK VS SCIENTISTS

The dispute over whether to increase or decrease government regulation of farmers currently is one of the hottest in Washington. Congress is being pressed to make a decision this year.

What makes the debate unusual is the fact that two government departments — Agriculture and Labor — are working in exactly opposite directions on the issue of government regulation.

While Agriculture Secretary Benson pleads with Congress to give farmers more freedom from production, marketing and other controls, Labor Secretary Mitchell is asking that farmers be put under strict control on the employment of farm labor.

Oddly enough, Congress seems not to be taking kindly toward either of the suggestions. It has refused so far, to give Mr. Benson authority to lower price supports and ease up on production controls.

Mr. Mitchell, likewise has been slow in getting support for his proposal to place hired farm workers under the law covering minimum wages and maximum hours of work.

Farm Wage Legislation

Bills have been introduced in Congress to establish a basic 40 hours a week for hired farm labor, with added pay for overtime, and for a minimum wage starting at 75c an hour the first year and in-

creasing to \$1.25 an hour in the fourth year.

Agricultural workers now are exempt from the minimum wage and maximum hours law which applies to most industrial workers. The aim is to put farm workers on an equal footing with those working in mines, factories, and stores.

Latest Department of Agriculture reports show the little more than one million farm workers employed earlier this year earned an average of \$1.03 per hour. It is the record-keeping rather than the wage minimum that most farmers object to.

The wage rate for farm workers has been going up faster than for industrial workers in recent years. During the past two years the average farm wage has increased by 25% compared with a 10% increase for non-agricultural workers.

Executive Order

Secretary Mitchell recently issued a tentative executive order, subject to public hearings to be held about June 1, that would give the Labor Department authority to impose regulations on all farm employers who get workers through the U.S. Employment Service.

The regulations, if put into force, would require that if any farmer in the area paid transportation for workers he hired, then all farmers who hire through USES

Now Is The Time . . .

—BY MAX SMITH

TO PLOW DOWN CORN

Most economical way to reduce Corn Borers in 1959 is to plow corn stalks and weeds, covering completely as possible, by May. Corn growers should assume this responsibility; it requires everyone together in this respect in order to job of control.

Max Smith

TO BE CAREFUL WITH INSECT

The spraying season is approaching many of the common insecticides only-kill bugs but will harm all forms of living including human beings. All containers should be well marked and kept away from children. They should be used in not polluting streams or farm suits in a fish kill. With the more liberal use everyone should be very careful because they are out.

TO START GRAZING GRADUALLY

The season is at hand and animals and caretakers are the summer season. All flocks and herds should be on the new pasture for only a short time (30 minutes) for the first few times; and then feed after received a feed of grain and hay. Too much new first will cause scouring and perhaps severe bloating.

TO MANAGE DAIRY HERDS CAREFULLY

son of off-flavored milk is approaching and proper of the herd is essential. The milking cows should be allowed to graze at first only after the milking hours are allowed to remain out on the pasture until the milking. It is recommended that the herd be from the grazing area at least three to four hours milking; this should be a longer period if much is in the area. The dairy barn should be well all times.

Homemakers Day Is April 22

The Tenth Annual Lancaster County Homemakers Day is scheduled to begin at 10 a.m., April 22 in the Blue Ball Fire Hall, Miss Norma Zehner, associate Home Economist announced Friday

Mrs Mark S Hess will preside at the morning session, which will feature Miss Catherine Love, Penn State

CONTROL WIREFORMS

Soil infested with wireworms should be treated with an insecticide before a crop is planted. Lloyd Adams, Penn State extension entomologist, says that aldrin, chlordane, dieldrin, and heptachlor are effective Broadcast the material and work well into the top six-inches of soil.

FERTILIZE LAWN

Lawns receiving a complete fertilizer in the fall should have a straight nitrogen fertilizer this spring, re-

specialist, speaking on "New Accents in Food Buying"

Miss Ruth Kriebich will narrate the annual fashion show The morning session also will include devotions and group singing.

The meeting will be adjourned for lunch, with everyone urged to bring box lunches and visit Coffee will be available.

Mrs. J Everett Kreider will preside at the afternoon session A mixed double-quartet from Garden Spot high school will appear

Mrs Howard York, former interior decorator with Armstrong Cork Co., will present latest information on color and fabric in home decoration

minds John Harper, Penn State extension agronomist.

Use 8 to 10 pounds per 1000 square feet of a urea-formaldehyde compound or 40 to 50 pounds of a natural organic nitrogen carrier.

Market Egg Producers!

Get Off To The Right Start!

Remember the saying, "The Way the Twig is Bent!" . . . that applies to your pullets raised for replacements in the house. Next winter's egg production costs and your performance will be determined by the way you feed manage your replacements right now. A cheaply built feed program will not save you money. Only top production, low feed conversion and low production costs per dozen will pay off.

Walter Ames of Narvon, Pennsylvania, in his third month production, held steady at 92% with conversion of 3.40 lb. per dozen the last three weeks. H & M Poultry Farms, Inc., the month of February, second month of program, had production of 89 3/4% and a conversion of 3.15 pound feed per dozen and feed costs of 13 1/4c per dozen produced.

For a program that will give you results like these, see Early Bird Representative, All Miller & Bushong direct Lancaster, EXpress 2-2145.

Miller & Bushong, Inc.

— Lancaster Farming Reviews —

Based on April 1 conditions, a winter wheat crop of 966 million bushels is indicated for 1959. This would be nine million bushels above the Dec. 1 forecast, 18 per cent less than the 1958 record crop but 19 per cent above average.

The indicated yield per seeded acre for the upcoming winter wheat crop is 21.4 bushels, well above the 16-bushel average, and second only to the extremely high 26.18 bushel average of 1958.

The possibility of increased alfalfa production in the Central Great Plains area is included in the announcement of a new variety, called Cody, that resists spotted Alfalfa Aphid. The new variety is presently recommended for Kansas, having been developed by the USDA and Kansas Experiment Station, and is expected to offer adaptation to the entire region.

A large portion of the Southern and Central Plains regions, extensive alfalfa production has been curtailed, or wiped out, during the past five years by the onslaught of the Spotted Alfalfa Aphid which migrated from Italy.

If farmers follow through on their March 1 intentions to plant in 1959, they will increase the total acreage planted to feed grains by about six million acres, according to the current USDA Feed Situation report.

Thus the total supply of feed grains for the 1959-60 season is expected to at least equal, if not exceed, the record supply in 1958-59. Total 1959 production of feed grains with 1954-58 average yields on the prospective plantings, would be about 152 million tons, only a little below the record crop of last year.

The reduction would be more than offset by a prospective increase of around 15-16 million tons in the carryover, giving a total feed grain supply of around 227 million tons, or 10 million tons above the 1958-59 record supply.

The USDA announced last week that Massachusetts has been declared modified-certified, brucellosis free, effective March 31. It is the first state to achieve this status in 1959 and the 16th state in the nation, plus Puerto Rico and the Virgin Islands, to be certified. In addition, 816 counties in 30 other states also have been certified.

Conn., Del., Maine, Mich., New Ham., New Mex., New Jersey, N. Carolina, Rhode Island, Utah, Vermont, Wash. Wis., and Penna. are the other states with modified-certified brucellosis free status.

For a state to qualify, not more than one per cent of all cattle and not more than five per cent of all herds may be infected with the disease.

The national program has been underway since 1934, when more than 11 per cent of U. S. cattle were infected.

A new spray called Sevin, is to be given a field-test demonstration against Gypsy Moth in New York beginning about May 10. The chemical, a carbamate, has given indications of effectiveness against the forest pests in research to find a control material which offers a minimum hazard to fish and wildlife.

Cabinet representatives from five major wheat-exporting countries — Argentina, Australia, Canada, France and the U. S. — will confer in Washington on May 5 and 6 on the Food for Peace proposal outlined by President Eisenhower in his January 29 address to Congress. The Director General of the World Food and Agriculture Or-

ganization will also take part in the meeting.

During February, the amount of poultry certified under Federal Inspection totaled 2,575,940,000 lbs., according to the USDA Crop Reporting Board. This compares with 72,574,000 lbs. certified in February, 1958, the sharp increase being due to the Jan. 1 effective date for compulsory federal inspection of all poultry in interstate commerce.

However, the extension of the inspection program to include more plants is currently stalled due to lack of appropriations for this purpose.

During the week of March 22 - 28, nearly 65 million persons were working on farms, up three per cent from the year-ago week. Hired farm workers reached an estimated total of nearly 1.4 million, largest March total since 1955, and 10 per cent higher than 1958. Cash farm wage rate on April 1 are also reported to reflect a strong demand for qualified farm

workers.

Composite farm wage rates on April 1 advanced to a national index of 620, highest level of record.

Early control of hay insect pests, including alfalfa weevil spittle bugs, and lesser clover leaf weevil, by application of two quarts an acre of Hectachlor emulsion 2-E, is urged by Associate Co. Agent Harry Sloat, by spray application before April 20.

When applied to alfalfa, three to six inches high, and clover, two to four inches high, the spray has given satisfactory control of the above insects and the higher concentrate dosage has provided better control of the clover root borer and clover root curculio than the regular one quart per acre spray on the first crop.

With new spring alfalfa seedlings, apply one quart per acre of Heptachlor, between May 10-15, Sloat advises.

A Lancaster County Extension Service study of cash returns from 77 farms, to compare profits from livestock against those without livestock has revealed that during 1957, farmers producing both crops and livestock received nearly six times as much for their labor as those producing just crops.

The figures show that the crop-livestock farmers had a 1957 labor income of \$2,553 compared with \$478 for non-livestock farmers. The report also shows a 1957 cash proof of Lancaster County historically high livestock profits.

Holstein Assn. Plans Spring Dairy Herd Tour

York County Holstein Breeders' Assn. Annual tour will leave the Conestoga Transportation Barns at 7 a.m., Monday, according to the tour committee.

That the use of the association is discouraged by the association to avoid confusion among members by the use of the bus. The tour is scheduled to leave Lancaster, Pa.

Hillside Farms, Trucks-ville; Woodborne Farms, D. Mock, and Smithholm Farms, Springville.

Members are to take packed lunches to be eaten on the bus between stops, with free beverage served at noon. The tour will stop at Clark Summit for evening meal and return to Lancaster about 10.30.

For Car, Tractor, or Truck

Preventive Care Is An Absolute Must

No matter what age car, truck or tractor you're caring for, preventative maintenance is a must. Now that spring is here, you should adjust for its climatic changes.

Maintenance people find that some of the most frequent causes of automotive break down are completely unnecessary and could be eliminated by a simple preventative maintenance program.

One of the most important focal points for engine trouble is the cooling system. The cooling system is one of the simplest parts of a modern engine and one of the easiest to maintain.

A simple semi-annual procedure which involves completely draining and flushing the cooling system, and adding fresh coolant, i.e. anti freeze in the fall and rust-inhibitor and water in the spring, is just about all that is necessary.

While the cooling system is being drained, check all water hose clamps, tension of the fan belt, and radiator pressure cap.

This being spring, remember—warmer weather means "change your oil"—to a heavier grade. Parts improperly lubricated really pile up repair bills.

Another periodic inspection that saves money in the long run is your battery inspection. Clean the terminals every now and then and add water when low to insure a good charge.

You'll also find that weather changes bring engine operational changes. When tuned for warmer temperatures, a motor gives greater performance and better economy. Carburetors rate special attention, make sure yours is clean and free of leaks. Your fuel mixture also may need resetting.

Besides these preventive steps that save money, don't forget those that could save your life. Highway driving is serious business; that fellow who heads in your direction on the other side of the white stripe holds a potential weapon in his hand.

A sudden blowout or failure to stop your car can cause lots of grief on our accident-riddled highways. Make sure you don't cause an accident

because you have neglected the proper precautions.

Faulty brakes are among our greatest killers. Have yours checked at the first hint of trouble. You can test the pressure while at a dead stop.

If your pedal goes to within two inches of the floorboard, you're taking unnecessary chances when you drive. Have the brakes adjusted and the master cylinder filled with heavy duty brake fluid.

And don't forget your parking brake. It might cause you a whopping repair bill when your parked car rolls into another. Make a simple check; pull the brake handle if it comes more than half way out, have it readjusted.

As for blowouts, a little care goes a long way. Keep tire pressures at recommended levels. Have your wheels inspected for possible misalignment—that'll prevent excess wear and save money while reducing accident possibilities. And why not make spring a time for tire rotation?

Liming Bluegrass Returns Yields

Bluegrass is one of the most palatable pasture grasses. It is early and will continue to grow so long as soil temperature is below 80 degrees F. and moisture is available. By proper management bluegrass will also be very productive.

County Agent Max M. Smith urges periodic liming of bluegrass pastures to maintain pH between 6.5 and 7.0. If more than two tons of lime per acre is required, apply half of the needed amount the year tested, and half the following year.

Apply phosphate and potash according to needs as indicated by soil tests. Each year at least 300 lbs. of 0-20-20 or equivalent per acre should be applied.

Bluegrass will respond tremendously to application of nitrogen. For maximum production, Smith says these pastures need an application of 80 to 100 lbs. of actual nitrogen per acre. Apply the nitrogen early in the spring before the grass begins to grow.

Careful management of nitrogen treated bluegrass is necessary. As growth will start pasturing about two weeks earlier than normal.

PROTECT

THIS VITAL ZONE
AGAINST FUNGUS

Terraclor—

- > Increases size of marketable heads and total yield (3-5 tons per acre).
- > One application gives control until harvest.
- > Easy to use, safe to apply (row, broadcast, transplant solution).
- > Replaces old, inefficient practice of liming soil.
- > Eliminates need for mercuric chloride for disease control.

Terraclor is compatible with other fungicides and may be combined with Captan where a disease complex exists. Terraclor is available in dust and wettable powder forms.

Molasses in Dessert

In a previous issue we had some recipes for you, using molasses in glazes for meats and vegetable cookery. Molasses adds an excellent flavor to dessert dishes too, so today we are devoting our recipe column to just such desserts. We're sure you'll find some recipes to your liking among the following.

Feather Cake

2 1/4 cups sifted cake flour
1/2 cup sugar
1 teaspoon double-acting baking powder
1/2 teaspoon soda
1 teaspoon salt
1/2 cup shortening
3/4 cup molasses
2 eggs
1 teaspoon flavoring
1/2 cup milk

Heat oven to 375 degrees. Sift first five ingredients into mixing bowl. Add shortening, molasses, eggs and flavoring. Mix until all flour is dampened.

Beat two minutes by hand or electric beater (low speed). Add milk. Beat two more minutes. Bake 25 minutes or until done in two well-greased, lightly floured, round, 8-inch, layer cake pans. Cool; frost as desired.

SPICED FEATHER CAKE
Omit flavoring. Add one teaspoon cinnamon, 1/2 teaspoon nutmeg, and 1/4 teaspoon cloves.

Sponge Cake

1 cup sifted cake flour
1/2 teaspoon salt
5 eggs, separated
1/2 cup sugar
1/2 cup molasses
1 tablespoon grated orange rind
1 1/2 teaspoons grated lemon rind
2 teaspoons lemon juice

Heat oven to 325 degrees. Sift together flour and salt. Beat egg yolks with rotary beater until thick and lemon-colored. Gradually beat in sugar and molasses.

Then, by the clock, beat with rotary or electric beater (low speed) an additional three minutes. Stir in orange rind, lemon rind and juice.

Add flour mixture, 1/2 at a time, mixing each addition until smooth. When all flour has been added, beat until light and fluffy (about 1/2 minute).

Beat egg whites until stiff enough to stand in peaks, but not dry; fold (by hand) into batter.

Bake 45 minutes in an ungreased 9-inch, tube cake pan. Turn cake pan upside down on wire cooler. If cake has not dropped out of pan when cold, loosen from sides with spatula.

Butter Frosting

1/2 cup butter or margarine
3 cups sifted confectioners' sugar
1 egg white, unbeaten
1 teaspoon vanilla, lemon or rum extract.
1 tablespoon molasses
2 tablespoons milk

Cream butter or margarine until fluffy. Add one cup confectioners' sugar, egg white, and flavoring. Mix well.

Add the remaining confectioners' sugar alternately with molasses and milk. Mix thoroughly. Spread on tops and sides of two 8-inch layers or on tops of two 9-inch layer cakes.

CHOCOLATE FROSTING

Add three tablespoons cocoa or one square bitter melted chocolate. Omit flavoring.

MOLASSES MOCHA FROSTING: Replace milk with two tablespoons cold, double strength coffee. Omit flavoring.

ORANGE FROSTING: Omit it flavoring and milk. Add two tablespoons orange juice, one teaspoon grated orange rind, and 1/2 teaspoon grated lemon rind.

Oatmeal Cookies

1 cup sifted enriched flour
1/4 teaspoon soda
1 teaspoon salt
1 1/2 teaspoons double-acting baking powder
1 teaspoon ginger
1 teaspoon cinnamon
1/2 teaspoon nutmeg
2 cups uncooked quick oats
1/2 cup shortening
1/2 cup sugar
1/2 cup molasses
1 teaspoon vanilla
1 teaspoon grated orange rind
1 egg
2 tablespoons milk
1/2 cup raisins
1/2 cup chopped nuts

Heat oven to 375 degrees. Sift together first seven ingredients; mix with quick oats. Cream shortening and sugar. Add molasses, vanilla, and orange rind. Beat in egg.

Add milk, raisins, and nuts. Stir in flour mixture. Drop from teaspoon onto greased

cookie sheets. Bake 10 minutes or until cookies are lightly browned.

Cool. Store in tightly sealed tin box. Makes about a dozen cookies.

Coconut Cake

2 cups sifted cake flour
1/4 teaspoon soda
1/4 teaspoon salt
1 cup sugar
1/2 cup butter or margarine
1 cup molasses
1/4 teaspoon vanilla
4 egg whites, unbeaten
1 1/4 cups moist, shredded coconut

Heat oven to 350 degrees. Sift together first five ingredients. Melt butter and margarine; add to flour along with molasses and egg whites.

Mix well, but do not mix. Stir in coconut to two greased 8-inch pans, lined with wax paper, greased and lightly

Soc. 2 Entertains No. 14 Ladies

Farm Women Society No 2
entertained the ladies of So-
ciety No 14 April 11 at the
Penryn Fire Hall, with the
roll call answered with fav-
orite scripture verses.
Devotions were in charge
of Mrs. Amos Waser.

The members voted dona-
tions to "Meals for Millions"
and International Farm You-
th Exchange to assist in sen-
ding Lancaster County's 1959
delegate, James Hess of Stras-
burg, to Peru

The society voted to at-
tend Homemakers Day, Ap-
ril 22 at the Blue Ball Fire
Hall.

The program consisted of
a reading by Mrs. Alvin Gray
bill and a demonstration of
Basket Weaving for the blind
by Melvin Huber.

The May meeting of Soc.
No 2 will be in the home of
Mrs. Ronald Gordley.

State Farm Wages At Record High

Farm wage rates on April
1 in Penna. were at a record
high for each method of pay-
ment. Wages per day without
board or room showed the
largest increase from Jan. 1,
1959 level.

Wages per day without
board or room at \$8.10 for
April 1 were three per cent
above the Jan. 1 level. On
a monthly basis, wages with
house only, averaged \$182,
while wages included with
board and room, averaged
\$128 per month.

Total workers on state fa-
rms at 189,000 during the
week of March 22-28 were
11 per cent below the 1954-
58 average for the same pe-
riod - but the same as a year
earlier.

This number included 161-
000 classified as family work-
ers and 28,000 hired workers.

Penn State's Dr. Dunne Edits New Swine Manual

A new book for veterinarians and researchers entitled Diseases of Swine, edited by Dr. Howard W. Dunne of Pennsylvania State University, has been acclaimed in nationwide book reviews.

Featuring 53 chapters written by 48 authorities on swine problems, Diseases of Swine has been termed "a long-needed addition to veterinary literature". Only one other modern publication is available in the field, a limited brochure.

The journal of Modern Veterinary Practice commends Dr Dunne for "smoothly uniting the various styles of his contributing authors into a unified volume of undeniable merit." This journal refers to the book as a "remarkable first edition which can not be too highly praised."

Three Penn State researchers in addition to Dr. Dunne have contributed chapters to the book.

Drs J F Hokanson and A J. Luedke have a chapter on "Miscellaneous Operations"

Dr J L Cobble has written on "Feeds and Feeding" Dr Dunne's chapters are entitled "Hog Cholera", "Streptococcosis and Colibacillosis"

Dog License Drive Starts

HARRISBURG, April 1 — The State Department of Agriculture today announced plans for a State Dog Law enforcement campaign designed to license all dogs with homes.

The campaign will begin April 6 in Franklin County and then will shift to Beaver and Washington Counties the next week. Dog law enforcement agents from surrounding counties will assist local agents.

Agents will check county treasurers records to verify dog license purchases in the counties.

Erie County will be checked starting May 11 and Delaware County later in May.

Pennsylvania's 38-year-old dog law is designed to limit the number of dogs running at large. At the same time the licensing of dogs assures the owner that the dog will be detained and the owner notified in the event a dog should inadvertently escape or stray from home.

However, unlicensed dogs

found running at large must be destroyed.

Dogs running at large frequently form packs which attack and kill sheep, poultry and wild animals. These dogs are also a source of diseases which may be transmitted to properly licensed and controlled animals.

Dog licenses may be obtained from county clerks, justices of the peace, magistrates, public or the State Department of Revenue. Puppies not six months old are exempt from license requirements, but must be controlled.

LEOLA — QUARRYVILLE

Farmsteads Deserve Spring Cleaning

HARRISBURG—A thorough spring housecleaning of farm lots and work areas to prevent accidents later this summer was urged today by State Secretary of Agriculture William L. Henning.

Henning noted that many summer accidents are caused by wire, trash and rubbish which are concealed by tall weeds and other vegetation. Many falls, puncture wounds

and other accidents are directly traceable to concealed junk.

"Slack days in the spring when planting and other activities are halted by wet weather are ideal for these housekeeping chores," Henning said.

"Another thing to remember is that trash piles formed by winter winds can become tinder boxes when dried by

the hot summer sun. Dead branches, leaf piles and the like should be removed from the farm building area now as insurance against fires later this year," he said.

Now, too is a good time to check the pesticide and chemical storage cabinets to be sure they are child-proof. Electrical wiring should be inspected for bare spots and frays caused by winter wind.

Foot injuries to humans and livestock often are the result of careless clean-up practices. Nails should be removed from used boards and all broken glass, junk and loose wire eliminated.

Sharp knives should be kept from the reach of children and pitchforks, spades, rakes and shop tools should be stored properly.

Henning also said that a clean farmstead means fewer hiding places for rodents which carry diseases, damage buildings and consume much stored animal feed.

"Farm people can help nature by cleaning up and around the farm", Henning said. "Give the farm a new look and make it a safer and easier place to live and work."

1958 through Feb. 28, totaled 7.8 million short tons. This was 37 per cent more than for the same eight months of 1957-58, the previous record. Shipments in February at 837,000 tons, were up 54 per cent from Feb. 1958.

For the eight month period; barley exports, at two million tons, were 71 per cent above the same period a year earlier; grain sorghums, at 1.9 million tons, are up nearly three times from last season's shipments; oat shipments, at 304,000 tons, 21 per cent ahead of last year; and corn exports, at 3.6 million tons and comprising 46 per cent of coarse grain exports to date, are about the same as last season's eight-month total.

REVIEWS

County Agent Max Smith has warned county farmers to use care in selecting alfalfa varieties recommended by the Extension agronomists, and to be especially careful in not confusing commercial trade brands with certified seed of improved varieties.

Of the wilt-resistant alfalfa varieties, Vernal tops the list of recommendations for Lancaster County, Smith reports.

Maynard Coe, director of farm safety for the National Safety Council stated recently that an effective educational program is the only way to reduce the accident rate on farms. Safety cannot be guaranteed by legislation or compulsion.

Coe points out that one farm in six will have a disabling injury during the year. The cost of these accidents for medical and hospital expense alone will total \$40 million. In addition, about 20 million man-days are lost.

Agriculture is now the third most hazardous occupation, exceeded only by mining and construction. "It is four times as dangerous to work on a farm as in a manufacturing plant," Coe said. This is due to the safety-mindedness of industrial workers from their safety education program.

designed for HIGHER QUALITY milk production

SUSPENDED & FLOOR TYPE

Also carrying replacement parts and rubbers for Surge milkers.

Surge lids and pulsators will fit on Universal seamless pails which are \$10. less than Surge pails.

When you need a Bulk Milk Tank, let me show you the advantages of the Zero Vacuum Tank with automatic washing.

Universal MILKERS

- ➔ SUPERIOR SANITARY FEATURES
- ➔ FASTER MILKING
- ➔ GREATER COW COMFORT

The Universal Suspended type milker lid is designed with large patented moisture well which traps bacteria laden vapor. A baffle deflects inflowing milk away from entering the vacuum line. Rigid stainless steel lid construction. Easier to keep clean, more sanitary. Use of low vacuum and famous Calf-Nose Inflation result in maximum production.

In the Universal Floor Type Milker the exclusive balanced claw provides faster and more uniform milking — finishing all four quarters at approximately the same time. Large patented moisture well in lid traps bacteria laden vapors. Built-in visual milking aid, plus low vacuum and calf nose inflations assure maximum production with greater cow comfort.

UNIVERSAL SUSPENDED TYPE \$131.50
UNIVERSAL FLOOR TYPE \$134.50

KILL GRUBS IN LOWN

Mole runways in lawn and gardens may be an indication of a white grub infestation in that area, says Stanley Gesell, Penn State extension entomologist. Treating the area with chemicals to eliminate the grubs will make the lawns and gardens less attractive to moles.

Flory Herd Sells ● Chicago Yards With \$297 Avg.

(From page 2)

The registered Ayrshire herd of Abram K Flory, of Manheim RD 3, was sold Monday at auction for a total of \$19,335, for the highest per-head price average of a dairy dispersal sale in the region so far this year. More than 500 buyers from Penna, Maryland, the New England states, and Canada were on hand for the auction.

The average price including young stock, was \$297.75 with the top 10 cows averaging \$505.50. The top price of \$700 was paid by Milton Brubaker, Lititz RD 1, for a three-year-old cow, "Mountain Valley Dixie Royal".

1,194,000. 15-16 at farm; FOB plants, 214,000 at 16.

lb. cutter grades 22.50. Two loads—mostly prime! 1043 and 1060 lb heifers 32, these feedlot mates of 3200 heifers last week when the price equalled the highest paid for heifers since 1952, load high choice and prime 1093 lb heifers 31.50, few loads and lots high choice & grades mixed choice and pr-

SOW OATS EARLY

If you want good yields of oats, sow early. Elmer Pifer, Penn State extension agronomist, reports that tests in Pennsylvania over several years show that delay in seeding spring oats has decreased yields as much as one bushel per acre for each day seeding is delayed. Sow when ground is fit to work.

ime heifers 29.75-31.00, good and choice grade 29.50, most utility and dard heifers 21-25.

Few standard cows, 23.50, utility and commercial cows 19-21.50, la canners and cutters heavy Holstein cutters utility cows mixed up to few light and shelly as low as 13. Utility, commercial bulls closed at 24, these prices equal lowest of the year on Bulls.

Few choice vealers, standard and good 27-34, bulk cull and vealers 15-26.

Load good 485 lb steer calves 34.60, load 583 lb stock steers 31.00, ad good and choice wghts 30.50, medium stock steers 29.50, choice 800-1025 lb steers 26.50-29.25, good 600 lb. stock 26.75.

● Egg Producers

(From page 1)

Wesley Kriebel, Extension area marketing specialist, will discuss—"Where is our competition?"

Kermit Birth, Penn State extension marketing specialist, will discuss "What do we need to do in Lancaster County to meet this competition in marketing our eggs?"

There will be a question and answer period from 9:30

the structures is planting of a spring oat cover crop, which will be plowed down for fall vegetables.

By then the highways will be receiving far less water and topsoil; Rowe's land will be keeping more of both; and Houseknecht will still be saying. "Look, no short rows."

U.S. Crop Outlook Reported Excellent

Winter wheat prospects have improved since December in the heavy producing Central Great Plains, which outweigh poorer prospects in some other areas. A cool, wet March hampered farming operations over the eastern

part, with refreshments served afterward.

The committee in charge of the meeting is: John H. Herr, chairman; Harry S. Sloat, Levi H. Brubaker, Raymond W. Sauder, Paul Pell and Noah W. Kreider.

third of the country and in the Central Plains, but open weather permitted rapid progress in the Southwest, and field work started earlier than usual in the northern plains.

Spring vegetable production is expected to be about the same as last year. Citrus fruit prospects were maintained during March and other fruits generally escaped any serious freeze damage.

Western mountain snowpack is still light in southern portions, but reservoir storage supplies are adequate for irrigation. Feed grain stocks remaining on farms on April 1 were eight per cent

EXTENSION CORDS AFFECT APPLIANCES

If your small electric cooking appliance isn't working properly, the extension cord may be at fault, points out Miss Helen E. Bell, Penn State home management extension specialist. Cords that are too long or too small to carry enough current may keep the appliance from working at its top capacity. When this happens, the appliance is slow to heat.

above a year earlier, and farm-stored food grains stocks were more than a half larger than last year.

2,200 Acres Added to Pa. Spring Vegetable Crops

The Penna. Crop Reporting Service has released a state vegetable prospect for April 1 plantings, which reports that growers indicate intentions to plant 3,600 acres to summer cabbage this year.

This acreage will go principally into fresh market channels with a small amount going for processing on a non-contract basis.

A spring spinach crop of 22,000 cwt from 500 acres is now in prospect the report says. This is 2,000 cwt. less than last year. Acreage was down 100 acres, but an average yield of 45 cwt. is in prospect, 500 lbs. above last year.

If intentions are realized an estimated 2,300 acres will be planted to Lima Beans for processing this year. Last year's planted acreage was 2,100, resulting in smaller stock carry over which contributed to the 10 per cent increase for 1959 plantings.

Prospective plantings of snap beans for processing in the state amounts to 6,600 acres, 12 per cent more than the 5,900 acres planted last year.

An estimated 10,000 acres of sweet corn for processing will be planted in the state if intentions are realized. This would represent an increase of 15 per cent from the 8,600 acres planted last year.

U. S. Vegetables

Spring vegetable production in the United States this year is expected to total about the same as last year and slightly above average.

Crops with substantially smaller production than last year are tomatoes, onions, cucumbers, snap beans and limas. Less sweet corn, green peppers, beets and eggplant also are forecast.

Combined production of early and mid-spring asparagus is slightly lower than a year ago. These reductions are partially offset by a large increase in celery.

More lettuce, cabbage, cauliflower, broccoli, spinach, green peas, carrots and shallots are expected.

PCE Directors Study Member Requirements

COATESVILLE — Directors of the Producers Cooperative Exchange are considering the possibility of setting up a marketing agreement for all shippers.

Meeting at the co-op plant in Coatesville, the Board discussed mutual advantages of requiring poultrymen members to ship all eggs, except those taken for home use and hatching, to the co-op.

A plan calling for members meeting certain minimum quality standards also was studied.

According to K. M. Souders, manager, producers attending a series of regional meetings during the past two months expressed favorable attitudes toward such volume and quality regulations. Further member opinion is being sampled.

public, with anyone permitted to make purchases, Exchange officials reported. This ruling is made to forego bonding and give local supporters of each of the C-O-T junior poultrymen a chance to participate.

1959 C-O-T Sale Set For May 6-7 At Exchange

The 1959 Sale of Chicken of Tomorrow entries will be held May 6 and 7 at Lancaster Poultry Center officials reported Friday.

The special sale of 15 dressed birds from each of more than 160 contest entries will be conducted at 10 a.m., May 6 in the Exchange Auction Room.

The remaining birds which contestants wish to enter for auction will be sold either before or after the regular May 7 LPE auction.

Both of these special sales will be open to the general

Improved Pastures May Double Stock Gains

Beef producers thinking about pasturing steers this summer are urged by Associate Chester County Agent Joseph H. Way to consider the extra beef that improved pastures will yield over unimproved pastures. He reports a Penn State test last summer showed that a native unimproved pasture produced less than half as much beef as an improved grass pasture. Yearling steers on the unimproved pasture gained .96 pounds daily compared to 2.09 pounds for steers on the improved grass.

While average permanent pasture in Pennsylvania does not yield more than 200 lbs. of beef per acre, it is not uncommon Way says, for improved pastures to yield three times this amount. Low-pro-

ducing permanent pastures have long been regarded as the logical summer feed for most beef cattle.

Recent changes in market demands emphasize rapid growth and slaughter at younger age and lighter weight. Rapidly-growing animals make good use of the high-protein feed that is provided by improved pasture. High yields of forage per acre permit high yields of beef per acre.

Way suggests that steers or heifers scheduled to go on good pasture this summer should not be fed to gain more than one and three quarter pounds daily during the winter and early spring.

Slaughter cattle carrying considerable condition should continue to be fed grain on pasture.

Lean, growthy cattle make most economical gains during the early pasture season with out grain. Good pasture usually furnishes enough protein during the early part of the season so there is no need for feeding additional protein supplement.

N-H 4-H Club Meets

New Holland 4-H Community Club met recently in the New Holland Bank.

The meeting featured a film from SPABC entitled, "County Fair."

Following remarks by Assistant County Agent Winthrop Merriam the meeting was adjourned.

The next meeting will be at 8 p.m., May 4, in the bank

The way the sleeves of a man's suit hang reveals the quality of workmanship in the suit, says Miss Thelma Baierl, Penn State extension clothing specialist. In a well made suit, the front of each sleeve comes to the center of a side pocket when sleeves hang naturally.

10,000 Fewer Cows Erase State Milk Output

The Penna. Crop Reporting Service has announced that milk production during March set a record with 595 million lbs., one per cent above the previous monthly record for March of 1958.

There were 10,000 fewer cows on farms to produce the new mark, but production per cow for the month was at a record 645 lbs. per cow, due largely to relatively mild weather and rapidly improving management and feeding practices by state dairymen. Production during March was 22 per cent above February, Production per cow was up 22 per cent.

The decline in cow numbers that has occurred during the last two years has apparently leveled off with the population holding at 923,000.

Milk-feed price ratio for March was less favorable than Feb., as the price of milk

dropped 20 cents with feed prices holding to slightly lower. Ratio was 1.43 (lbs. of milk equal in value to 1 lb. of whole milk) as was 1.50 in Feb. and March, 1958. The ratio for March was 1.37 compared with 1.42 in February.

KNOW CORD'S USE

Electric cords are used for specific purposes, so know how a cord will be used before you buy it, advises Helen E. Bell, Penn State home management specialist.

Know whether the cord will be used in a heated or unheated room. Keep in mind the cord will be used indoors or outdoors, and whether it will receive much twisting.

Feed For PRODUCTION

It's easy with Wayne 16% Dairy

This clean, wholesome feed is high in digestible nutrients, carries a popular variety of blended ingredients, yet contains no filler or screenings.

Fed straight from the bag to cows getting good quality roughage, Wayne 16% Dairy will push milk production to the peak of the cow's inherited ability to produce.

Properly balanced rations will boost milk production as much as 30%.
